

To our valued customers

In winter conditions please note the following to help keep our equipment running on your projects.

- 1) Below 30 Deg. All engine powered units should have Block and/or tank heaters plugged in.
- 2) Engine block heaters should be on a designated 20 amp. Circuit.
- 3) Diesel units need to be filled with winter grade fuel and additive if colder than -0 deg.
- 4) Engine powered units need a minimum of 5 to 10 minutes warm-up before being put to work.
- 5) If Service Call is made by customer, it is our right to refuse if colder than -10 deg.
- 6) During service call, if we find unit is / were not plugged in, customer will be charged.
- 7) Electric / Battery powered units lose up to 50% of their power/life during cold weather conditions.
- 8) During snow and ice rain, control panels and boxes should be covered.
- 9) On boomlifts, keep foot pedal actuator clear of snow and ice.
- 10) Please allow extra time for deliveries during bad weather conditions.

As always we appreciate your business!

Chuck or Gary 612 379-8000
